

Netflix Content Strategy Dashboard

Project Overview

The **Netflix Content Strategy Dashboard** is an end-to-end Data Analytics project that analyzes Netflix's content library using **Excel, MySQL, and Power BI**. The project focuses on data cleaning, SQL-based business analysis, and interactive dashboard development to uncover valuable insights about Netflix's movies and TV shows.

Project Objective

The objective of this project is to analyze Netflix's content catalog and answer important business questions such as:

- What type of content dominates Netflix?
 - Which countries contribute the most content?
 - Which genres are the most popular?
 - How has Netflix's content library grown over the years?
 - What are the most common audience ratings?
 - What business insights can be derived from the data?
-

Tools & Technologies

- **Microsoft Excel** – Data Cleaning
 - **MySQL** – Data Analysis
 - **Power BI** – Dashboard & Visualization
 - **GitHub** – Project Documentation & Version Control
-

Dataset

- **Dataset:** Netflix Movies and TV Shows
 - **Source:** Kaggle
 - **Records:** 8,807
 - **Format:** CSV
-

Data Cleaning

The dataset was cleaned in Excel before importing it into MySQL and Power BI.

Cleaning Tasks Performed

- Removed leading and trailing spaces from text columns.
 - Fixed 3 misaligned records where duration values were incorrectly stored in the rating column.
 - Verified duplicate records (no duplicate rows found).
 - Standardized the `date_added` column into a proper date format.
 - Filled missing values using meaningful placeholders:
 - Director → **Not Specified**
 - Cast → **Not Specified**
 - Country → **Not Specified**
 - Rating → **Not Rated**
 - Left missing `date_added` values blank because the correct dates were unavailable.
 - Validated column consistency and prepared the dataset for analysis.
-

SQL Analysis

SQL was used to explore the dataset and answer business questions.

Analysis Includes

- Database Setup
 - Data Quality Validation
 - Content Library Overview
 - Movies vs TV Shows Analysis
 - Content Growth Trend Analysis
 - Country-wise Content Analysis
 - Genre Analysis
 - Director Analysis
 - Rating Analysis
 - Advanced SQL Queries
 - Business Insights
-

Power BI Dashboard

The dashboard provides an interactive view of Netflix's content library.

Dashboard Features

- KPI Cards
- Movies vs TV Shows Distribution
- Content Added by Year
- Top Content Producing Countries
- Genre Distribution
- Rating Distribution

- Interactive Filters
- Business Insights Panel

Key Business Insights

- The United States contributes the highest number of titles on Netflix.
- Movies significantly outnumber TV Shows.
- TV-MA is the most frequently assigned content rating.
- Drama and International Movies are among the most popular genres.
- Netflix experienced rapid content growth after 2016.
- Most content originates from a limited number of countries.

Project Structure

```

How to Use

1. Download or clone this repository.
 2. Open the cleaned dataset in Excel.
 3. Import the dataset into MySQL and execute the SQL queries.
 4. Open the Power BI (.pbix) file.
 5. Explore the interactive dashboard and insights.
-

Future Improvements

- Build an interactive SQL reporting dashboard.
 - Add advanced Power BI DAX measures.
 - Integrate streaming platform comparison datasets.
 - Perform sentiment analysis using viewer reviews.
 - Automate the ETL process using Power Query.
